Controlled Evidence Acquisition and Explanation Grounding

RepoPairBench pilot: one scenario x three evidence conditions x two harnesses

Controlled Source Evidence

Unchanged target
Log.GET
controllers/panel/log.py

Evidence conditions

E1: context supplied
Sufficient initial source packet

E2: context retrievable
Limited packet + available context

E3: context unavailable
Same packet; output context absent

Same frozen task instructions
Allowed source files only

Agent Runtime

Qwen Code OR OpenCode - one fresh session

Shared model: qwen3.5:9b-q4_K_M
Ollama endpoint / configured context: 16,384

Assessment & Stopping

Reason over available evidence
Request context when needed
Conclude or state uncertainty

Repository Navigation

Read-only tools
Read / glob / grep / list

Returned Evidence

Source excerpts
Search matches
Errors / absent paths

Tool results

Read-only workspace; no private-reference access

Model output

Final Assessment

Verdict + Rationale

Evidence used + unresolved gaps

Vulnerable / Not vulnerable / Insufficient evidence

Human Evaluation

All six cells; manual scoring

Recognition of evidence gaps
Evidence acquisition
Appropriate abstention
Explanation grounding

Unsupported claims + trace citations

Trace-grounded human scoring

Raw traces + final text -> separate mechanical normalization

Private Evaluation Reference

Paired source, scoped label, patch and scoring rationale - never given to agents

Reference for scoring

Conceptual workflow; navigation is optional in E1. Appearance adapted from DREA Fig. 2; no scientific scores are shown.
